

Types of Alerts and how to edit their format

To edit the alerts, go to Configuration -> Application.

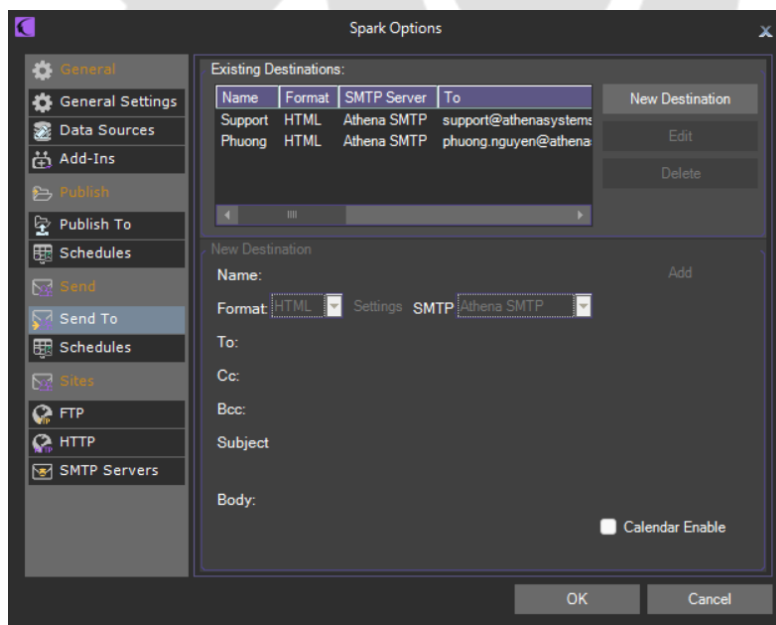

The alerts will be displayed on the right side of the window. For each type of them you can:

- Modify background colors, foreground color, default image...
- Edit the desktop alert (pop-up in the right-bottom with the alert description).
- Enable or disable alert notifications to the email you wish.
- All the fields in this section can be edited for all types of warnings:

1. Low.
2. Medium.
3. High.
4. Critical.

To activate or deactivate these, set the value to **True** or **False**.

To Edit the destination of the Email alerts, you can click on 'Send to', under 'Send' section on the right of Spark Options window, edit the fields on the right and click ADD, and then click OK. You can follow the steps from our article [Send to a Destination](#).
