

Ignore or not ignore the selected rows background color

All grids now allow you to ignore the selected rows background color. This is per grid (set to false by default). This feature is more useful when you have custom colors for the rows as in your blotters.

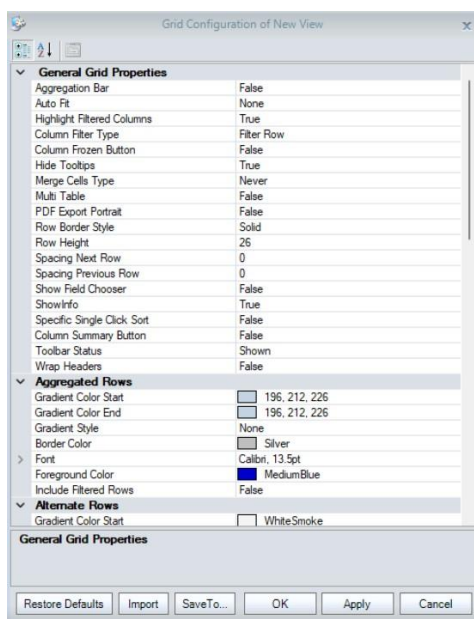

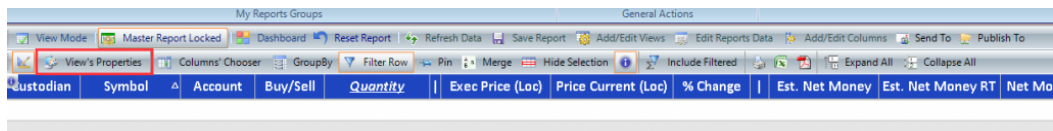

1. Grid Properties.

2. Selected Rows.

3. Hide selection: It is set to FALSE by default.

- If we want the selected rows to respect the color defined by the conditional formatting instead of using the color defined in the selected row section → Set to **TRUE**.
- If we want the selected rows to be marked with the color defined in the selected row section instead of using the original conditional formatting → Set to **FALSE**.

4. Apply & OK.
